## **INSTALLATION AND SERVICE MANUAL**

## **FOR**

# COUNTER ELECTRIC DISPENSER LANCER SERIES 500

#### **SPECIFICATIONS**

#### **DIMENSION**

Width	10 3/8 inches	(264 mm)	
Depth	25 1/4 inches	(641 mm)	Please refer to the Lancer web
Height (without legs)	22 15/16 inches	(583 mm)	site (www.lancercorp.com)
WEIGHT			for information relating to Lancer Installation and
Shipping	108 pounds	(49.0 kg)	Service Manuals, Instruction
Empty	89 pounds	(40.4 kg)	Sheets, Technical Bulletins,
Operating	125 pounds	(55.4 kg)	Service Bulletins, etc.

#### WATER REQUIREMENTS

#### **CAUTION**

IF WATER SOURCE EXCEEDS 60 PSIG (4.22 KG/CM²), A RECOMMENDED WATER REGULATOR ASSEMBLY (PN 18-0253) MUST BE USED TO LIMIT WATER PRESSURE TO 60 PSIG (4.22 KG/CM²). FAILURE TO USE REGULATOR WILL RESULT IN IMPROPER PERFORMANCE OF DISPENSER.

Minimum flowing pressure of 35 PSIG (2.46 kg/cm<sup>2</sup>, 2.41 BAR)

Maximum static pressure of 60 PSIG (4.22 kg/cm<sup>2</sup>, 4.14 BAR)

#### CARBON DIOXIDE (CO2) REQUIREMENTS

Minimum pressure of 70 PSIG (4.92 kg/cm<sup>2</sup>, 4.83 BAR) Maximum pressure of 80 PSIG (5.62 kg/cm<sup>2</sup>, 5.52 BAR)

ICE BANK WEIGHT 16 pounds (17.26 kg)
WATER BATH CAPACITY 5.1 gallons (19.3 liters)
COMPRESSOR 1/4 HP Tecumseh, 115V/60Hz

AGITATOR MOTOR 15W, 115V CONDENSER FAN MOTOR 9W, 115V

ICE BANK CONTROL

Lancer Electronic Ice Bank Control

TRANSFORMER

Basler, 115V (Primary)/24V (Secondary)

Optional 230V/50Hz and 240V/60Hz systems available.

#### **DRINK CAPACITY**

57 – 12 ounce drinks under 40°F (4.4°C) at four (4) drinks per minute with 75°F (23.9°C) ambient, inlet water, and inlet syrup.

#### 1. INSTALLATION

#### 1.1 RECEIVING

Each unit is completely tested under operating conditions and thoroughly inspected before shipment. At the time of shipment, the carrier accepts the unit and any claim for damage must be made with the carrier. Upon receiving unit(s) from the delivering carrier, carefully inspect carton for visible indication of damage. If damage exists, have carrier note same on bill of lading and file a claim with the carrier.

#### 1.2 UNPACKING

- A. Remove cup rest by lifting out.
- B. Remove splash plate by pulling forward at the bottom. Drip tray can be removed before removing splash plate.
- C. Remove drip tray by lifting out.
- D. Remove shipping base. **DO NOT LAY UNIT ON ITS SIDE OR BACK. DO NOT USE DRIP TRAY FRAME FOR A HANDLE.**

#### **NOTE**

If unit is to be transported, it is advisable to leave unit secured to plywood shipping base.

E. Inspect unit for concealed damage. If damage exists, notify delivering carrier note and file a claim against the carrier.

#### 1.3 INSTALLATION

The dispenser is designed to sit on a flat, supported surface *capable of supporting a minimum* weight of 200 pounds (90.7 kg). It may be either counter or leg mounted. When the dispenser is to be permanently bolted to the counter top, seal dispenser base to counter top with a silicone sealant which provides a smooth and easily cleanable bond to the counter.

#### NOTE

NSF listed units must be sealed to the counter or have four (4) inch legs installed.

#### **WARNING**

# FAILURE TO MAINTAIN PROPER AIR CLEARANCE WILL CAUSE THE COMPRESSOR TO OVERHEAT AND WILL RESULT IN PREMATURE COMPONENT FAILURE.

Locate dispenser to allow approximately 15 inches (380 mm) of unobstructed space above and six (6) inches (152 mm) of unobstructed space in back of the unit for proper air circulation and removal of bonnet. Air is drawn in through the back grill and is exhausted out the top grill.

- A. Position dispenser on counter.
- B. Remove bonnet from the dispenser.
- C. Remove insulation strip from in front of refrigeration deck. Fill tank with water until water comes out of overflow tube. Replace insulation. Use bottled water where a water problem exists.

#### 1.4 CONNECTING TO ELECTRICAL POWER

#### WARNING

THIS UNIT MUST BE PROPERLY ELECTRICALLY GROUNDED TO AVOID POSSIBLE FATAL ELECTRICAL SHOCK OR SERIOUS INJURY TO THE OPERATOR. THE POWER CORD IS PROVIDED WITH A THREE PRONG GROUNDED PLUG. IF A THREE-HOLE GROUNDED ELECTRICAL OUTLET IS NOT AVAILABLE, USE AN APPROVED METHOD TO GROUND THE UNIT.

# DO NOT USE EXTENSION CORDS WITH THIS UNIT. DO NOT "GANG" TOGETHER WITH OTHER ELECTRICAL DEVICES ON THE SAME OUTLET.

- A. Check the dispenser serial number plate for unit's correct electrical requirements. Do not plug into electrical outlet unless unit electrical configuration, located on serial plate, agrees with local available power supply.
- B. Route the power supply cord to a grounded electrical outlet of the proper voltage and amperage rating, and plug in the unit. This will turn on the refrigeration system and allow it to start cooling and allow ice bank to form while completing installation. Approximately four (4) hours are required to form a full ice bank.

#### NOTE

Units equipped with an electronic ice bank control contain a five (5) minute delay. Compressor and fan motor will not begin running until five (5) minutes after the unit is energized.

#### 1.5 CONNECTING SUPPLY LINES TO SOURCES

A. Connect free end of plain water lines to water supply [must be 35 PSI (2.4 BAR) or more].

- B. Mark both ends of product and water lines and route to dispenser. Flush lines to be sure each is clean. Failure to do so may result in clogging of valve(s), resulting in improper operation. Connect lines to dispenser and secure using Oetiker clamps.
- C. Route drain tube to dispenser.
- D. Connect drain tube to drip tray and install on dispenser.
- E. Turn on water supply.
- F. Open all dispenser valves until air is bled from system.
- G. Actuate valve until a smooth flow of water is obtained.
- H. Check for leaks.
- I. Connect free ends of product lines to proper tanks or bag-in-box.
- J. Check for syrup leaks.
- K. Adust the water flow.
- L. Install splash plate on dispenser.
- M. Install cup rest on dispenser.
- N. Replace bonnet on dispenser.

#### 2. SCHEDULED MAINTENANCE

#### 2.1 DAILY

- A. Remove the nozzle and diffuser from each valve and rinse well in warm water. Do **NOT** use soap or detergent. This will cause foaming and off taste in finished product.
- B. Remove the cup rest and wash in warm soapy water.
- C. Pour warm soapy water into the drip tray and wipe with a clean cloth.
- D. With a clean cloth and warm water, wipe off all of the unit's exterior surfaces. **DO NOT USE** ABRASIVE SOAPS OR STRONG DETERGENTS.
- E. Replace the cup rest, valve diffusers, and valve nozzles.

#### 2.2 WEEKLY

- A. Taste each product for off tastes and/or brix changes.
- B. Remove the bonnet and check the level of water in the water bath. Replenish as required, and replace the bonnet.

#### 2.3 MONTHLY

- A. Unplug the dispenser from power source.
- B. Remove the bonnet and clean the dirt from the condenser using a soft brush.
- C. Replace the bonnet and plug in the unit.

#### 2.4 EVERY SIX MONTHS

A. Clean and sanitize the unit using the appropriate procedures outlined in Section 3 of this manual.

#### 2.5 YEARLY

- A Clean water bath interior, including evaporator coils and refrigeration components.
- B. Clean the entire exterior of the unit.
- C. Sanitize syrup lines.

#### 3. DISPENSER CLEANING AND SANITIZING

#### 3.1 AMBIENT PROCESS

- A. The ambient process is the most common method for cleaning and sanitizing dispenser equipment. The detergent should be caustic-based and the sanitizer should be low pH (7.0) chloride solution.
- B. Disconnect syrup containers and remove product from tubing by purging with carbon dioxide.
- C. Rinse the lines and fittings with clean, room temperature water to remove all traces of residual product.
- D. Fill lines with a caustic-based (low-sudsing, non-perfumed, and easily rinsed) detergent solution. The solution should be prepared in accordance with the manufacturer's recommendations, but should be at least two (2) percent sodium hydroxide. Make sure the lines are completely filled and allow to stand for at least ten (10) minutes.
- E. Flush the detergent solution from the lines with clean water. Continue rinsing until testing with

- phenolpthalein shows that the rinse water is free of residual detergent.
- F. Fill the lines with a low pH (7.0) chlorine solution containing at least 50 parts per million (PPM) (50 mg/L) available chlorine. Make sure that lines are completely filled and allow to stand for ten (10) minutes.
- G. Reconnect syrup containers and ready Unit for operation.

#### **WARNING**

# REMOVE SANITIZING SOLUTION FROM DISPENSER AS INSTRUCTED. RESIDUAL SANITIZING SOLUTION LEFT IN SYSTEM COULD CREATE HEALTH HAZARD.

H. Draw drinks to refill lines and flush the chlorine solution from the dispenser.

#### NOTE

Please note that a fresh water rinse cannot follow sanitization of equipment. Purge only with the end use product. *This is an NSF requirement.* 

I. Taste the beverage to verify that there is no off taste.

#### 3.2 VALVES

- A. Valves may be cleaned and sanitized in the same manner
  - 1. Remove cover and disconnect power so not to activate the valve while cleaning. Remove nozzle and diffuser. Wash these parts in cleaning solution, then immerse them in a bath of sanitizing solution for 15 minutes.
  - 2. Visually inspect around nozzle area for syrup residue. This area may be cleaned with warm water and cloth or with the nozzle brush supplied. Wipe off dispensing lever.
  - 3. Wearing sanitary gloves, remove, drain and air dry the nozzle and diffuser.
  - 4. Wearing sanitary gloves, replace diffuser and twist nozzle into place.
  - 5. Draw drinks to flush the chlorine solution from the valves.

#### **NOTE**

Please note that a fresh water rinse cannot follow sanitization of equipment. Purge only with the end use product. *This is an NSF requirement.* 

- 6. Taste the beverage to verify that there is no off taste.
- 7. Connect power and replace cover. Valve is ready for operation.

#### 4. TROUBLESHOOTING

	TROUBLE		<u>CAUSE</u>	REMEDY	
4.1	Water leakage around nozzle.	A.	Damaged or improperly installed o-ring above diffuser.	A.	If damaged, replace. If improperly installed, adjust.
4.2	Leakage between upper and lower valve bodies.	A. B.	Gap between upper and lower valve bodies. Worn or damaged paddle arm assemblies.		Tighten all six (6) retaining screws.  Replace paddle arm assemblies.
4.3	Miscellaneous leakage.	A. B.	Gap between parts.  Damaged or improperly installed o-rings.	А. В.	Tighten appropriate retaining screws. Replace or adjust appropriate o-rings.
4.4	Insufficient water flow.	A. B. C.	Insufficient incoming supply water pressure.  Shutoff on mounting block not fully open. Foreign debris in water flow control.	A. B. C.	Verify incoming supply water pressure is a minimum of 35 PSI (2.4 bar). Open shutoff fully.  Remove water flow control from upper body and clean out any foreign material to ensure smooth free spool movement.

	TROUBLE		<u>CAUSE</u>		REMEDY
4.5	Insufficient syrup flow.	В.	Insufficient CO <sub>2</sub> pressure to BIB pumps.  Shutoff on mounting block not fully open.	В.	•
		C.	Foreign debris in syrup flow control.	C.	Remove syrup flow control from upper body and clean out any foreign material to ensure smooth free spool movement.
4.6	Erratic ratio.	Α.	Incoming water and/or syrup supply not at minimum flowing pressure.	A.	Check pressure and adjust.
		В.	Foreign debris in water and/or syrup flow controls.	B.	Remove flow controls from upper body and clean out any foreign material to ensure smooth free spool movement.
4.7	No product dispensed.	A.	Water and syrup shutoffs on mounting block not fully open.	A.	Open shutoffs fully.
		В.	The key switch on an electric valve is in the OFF position.	В.	Turn key switch to ON position.
		C.	Cup lever arm or ID panel actuator on electric valve is not		Repair.
		D.	actuating the switch. Electric current not reaching Valve.	D.	Check electric current supplied to valve. If current is adequate, check solenoid coil and switch, and replace if necessary.
		E.	Improper or inadequate water or syrup supply.	E.	Remove valve from mounting block and open shutoffs slightly and check water and syrup flow. If no flow, check dispenser for freeze-up or other problems.
4.8	Water only dispensed;	A.	Water or syrup shutoff on	A.	Open shutoff fully.
	no syrup; or syrup only dispensed, no water.	В.	mounting block not fully open. Improper or inadequate water or syrup flow.	B.	Remove valve from mounting block, open shutoffs slightly and check water and syrup flow. If no flow check dispenser for freeze-up or other problems. Ensure BIB connection is engaged.
		C.	Kinked line.	C.	Remove kink or replace line.
4.9	Valve will not shut off.	Α.	Cup lever may be sticking or binding.	A.	Correct or replace lever.
		B. C.	Switch not actuating freely. Solenoid armature not returning to bottom position.	B. C.	Check switch for free actuation. Replace defective armature or spring.
4.10	Excessive foaming.	Α.	Incoming water or syrup temperature too high.	A.	Consider larger dispenser or
		В.	Water flow rate too high.	B.	precooler. Readjust and reset ratio. Refer to Sections 1.5.K and 1.5.L.
		C.	Nozzle and diffuser not properly installed.	C.	Remove and reinstall properly.
			Nozzle and diffuser not clean. Air in BIB lines. Poor quality ice. High beverage temperature.	D. E. F. G.	Remove and clean. Bleed air from BIB lines. Check quality of ice used in drink. Check refrigeration system.

	TROUBLE		CAUSE		REMEDY
sta	mpressor does not ort (no hum), but ndenser fan motor ns.	A. B.	Compressor relay or overload malfunctioning. Inadequate voltage.	A. B.	Replace compressor relay or overload.  Measure voltage across common and run terminal on compressor.  Voltage must not drop below 90% of rated voltage.
		C. D.	Incorrect wiring. Compressor malfunctioning.	C. D.	
cor free	mpressor starts and ntinues to run until eze up and will not off.	A. B. C.	Ice bank control failure. Incorrect wiring. Probe shorted.	A. B. C.	Replace ice bank control. Refer to wiring diagram and correct. Check probe for foreign material or damage.
	mpressor does not irt but hums.		Inadequate voltage.  Incorrect wiring. Starting relay malfunctioning.	A. B. C.	and run terminal on compressor. Voltage must not drop below 90% of rated voltage.
		D.	Compressor malfunctioning.	D.	correct relay will cause compressor failure. Replace compressor.
	mpressor starts but	A.	Inadequate voltage.	Α.	Measure voltage across common
win a fe inte	es not switch off start and and start of the start of the seconds before ernal overload itches compressor off)	C.	Incorrect wiring. Starting relay malfunctioning.	B. C.	and run terminal on compressor. Refer to wiring diagram and correct. Replace starting relay. Be sure to use correct relay. Failure to use correct relay will cause compressor failure.
run	mpressor starts and as a short time but uts off on overload.	A. B.	Dirty condenser. Insufficient or blocked air flow. Inadequate voltage.	A. B.	Clean the condenser. Remove all obstructions and allow for minimum clearances of 15 inches (380 mm) over top. Measure voltage across common and run terminal on compressor.
		D. E.	Incorrect wiring. Defective condenser fan	D. E.	Voltage must not drop below 90% of rated voltage.
		F. G.	motor. Refrigerant leak. Compressor malfunctioning.	F. G.	Repair and recharge. Replace compressor.
Co will five Off	mpressor and ndenser Fan Motor I not start after e (5) minute Power felay (Lancer EIBC port only).	В.	Transformer tripped. Relay will not turn on compressor. Probe unplugged.		Reset transformer. Failed relay. Replace Control Board. Check probe connection at PCB.
Co will five Off	mpressor and ndenser Fan Motor I not start after e (5) minute Power f delay (Lancer EIBC, A Only).	B.	Improper Wiring. Probe unplugged. Damaged electronics.	B.	Check Power Indicator Lamp; check wiring per Wiring Diagram. Check Probe connection at PCB. Replace Control.
4.18 Wa	arm drinks.	A. B.	Restricted airflow.	A	Check clearances around sides, top, and inlet of unit. Remove objects blocking airflow through grill.
(Section A	 18 continued on next pag		Dispenser connected to hot water supply.	D.	Switch to cold water supply.

TROUBLE	CAUSE	REMEDY	
(Section 4.18 continued from previous page)			
	C. Refrigeration system not running.	C. Refer to Sections 4.11 - 4.15.	
	D. Refrigerant leak.     E. Condenser fan motor not working.	D. Repair and recharge. E. Replace condenser fan motor.	
	F. Dirty condenser. G. Dispenser capacity exceeded.	F. Clean condenser. G. Add pre-chiller.
